

Endpoint protection on all devices

(Antivirus software on PC's, laptops, work phones etc.)

Multi-factor Authentication (MFA)

On all email accounts and external access to the network.

PII (Personally Identifiable Information)

Data is encrypted whilst on the insured's system.

Backups

Made regularly and stored with good hygiene. MFA is required to access them.

SPOF's (Single Point of Failure)

Identified with a plan in place in the event of failure

(e.g. Microsoft Azure going down and no access to files stored on cloud)

End of Life software & hardware identified

Plan in place to replace it, or specific assistance from manufacturer to ensure no weaknesses.

Limited admin access

Admin access limited across the server. No more than 5 admin accounts. Regular password changes & MFA where possible.

Don't forget...

You need to ensure the same level of cover across all offices. You're only as strong as the weakest link.
